

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-58. (Canceled)

59. (New) A method of making a heat treated coated article, the method comprising:

 providing a glass substrate;
 forming a multi-layer coating on the glass substrate, the multi-layer coating having a sheet resistance of no greater than 20 ohms/square, and wherein the coating comprises at least one layer comprising silver sandwiched between at least first and second dielectric layers; and

 heat treating the glass substrate with the multi-layer coating thereon so that the heat treated coated article has a glass side ΔE^* value of no greater than 2.5.

60. (New) The method of claim 59, wherein the heat treated coated article has a glass side ΔE^* value of no greater than 2.0.

61. (New) The method of claim 59, wherein the heat treated coated article has a glass side Δa^* value of no greater than 0.8.

62. (New) The method of claim 59, wherein at least one of the dielectric layers comprises silicon nitride which optionally may be doped with aluminum.

63. (New) The method of claim 59, wherein a layer comprising NiCr is located immediately adjacent and contacting at least one side of the layer comprising silver.

64. (New) The method of claim 59, wherein the heat treated coated article comprises an IG window unit.
